Value addition techniques used for strengthening of bags

Swapnil Singh, Poonam Singh and Abha Singh

Abstract

Value addition techniques are used on bags of old clothes and plastic sheets. Colour combination has been used to enhance the beauty from ancient time. It is believed that strength of bags by lining jute cloth and synthetic sheets were developed earlier than the use of bags itself, used value added materials is the knowledge, selection and application of the basic knowledge of durability of cloth. The present study was conducted to stitch bags that were suitable for value addition materials. Thirty value added bags were identified for application in old cloth and thick plastic works. Created works got evaluated from 100 respondents including both experts and consumers. 5 top ranked value added techniques used on bags were selected from each category.

Keywords: value addition, bags, plastic, pollution

Introduction

Plastic pollution is a problem all over the world. Each year at least 8 million tons of plastic find their way into the ocean. The problem is equivalent of dumping the contents of one garbage truck into the ocean every minute. Plastic shopping bags, carrier bags or plastic grocery bags are a types of plastic bag used as shopping bags and made from various kinds of plastic in use by consumers worldwide since the 1960; these bags are sometimes called single use bags, referring to carrying items from a store to home. Shopping bags are medium - sized bags typically ground 10-20 liters (2.5-5 gallons) in volume (though much longer version exist, especially for non-grocery shopping); that are used by shoppers to carry home, their purchases. Some are intended as single - use disposable products though people may reuse them for storage or as bin liners etc. Others are designed as reusable shopping bags. Reusable shopping bags are a kind of carrier bag, which are available for sale in super markets and apparel shops. In a 2011 study of 4.5 retail chain (Funded by a Pro - business group that opposes plastic bag bans), 23% of reusable bags were found to have levels of lead that were higher than the 100-ppm standard considered safe for product packaging though did not present a risk of contaminating food. Plastic consumption has become an integral part of our daily life. The complication in the existing reusable bag for shopping for a particular item along with its methodology is broadly discussed providing an ideal solution.

BYOB basically stands for "Bring your own Bag." Thus, bringing one's own bags to the grocery store, and having those bags visible while shopping could motivate more "green" choices by activating a broad goal to gain social approval or a goal to help the environment.

This makes a switch to alternatives like cloth bags, jute bags or eco-friendly bags made out of natural starches and vegetable wastes instead of plastic bag, whenever you visit the Kirana shop or a vegetable market. Stash away reusable bags in your house, care for it, is come handy without having any extra load on the health of mother earth. A company in Indonesia has created a plastic bag so ecofriendly you can eat it. It's made out of Cassava, the vegetable root which is a staple in the diets of many in Africa, Latin America and Asia, but which can also be used in manufacturing. The company Avani eco based in Bali has created a bag that they say looks and feels like plastic but is completely bio- degradable and compostable it also dissolves in water, so if animals eat it, it won't cause any harm. They say it's so safe, in fact that humans could even swallow it. Bags are also a form of storing commodities and these complement the overall appearance of the storing capacity. The selection of above treatment mainly depends on functionality, color combination, designing attributes, embellishment technique, texture.

Research methods

Various value addition bags were stitched from different material. From the collected material,

suitable material and designs were taken for the development of value added for bags. The value-added material were taken out and stitching of the bags was done. Total 30 bags were prepared. Prepared bags were subjected to visual evaluation. The design of the value added bag were ranked in order of preference on selected parameters. The evaluation was done was by exhibition with a panel of 100 respondents including judges and consumer in Kumarganj Ayodhya and Barabanki city.

Research findings and Discussion

All value added bags were usually evaluated by hundred respondents including both experts and consumers. The responses from the respondents for the value addition stitched bags were ranked in order of preference. All the stitched value added bags were highly appreciated by all the judges. Acceptability of developed items through value addition techniques used was judged and acceptance was taken by respondents.

Table 1: Parameters used in value added bags

| Parameters Bags | Suitability | Functionality | Colour and combination | Designing | Embellishment techniques | Texture | Overall appearance | Cost | Quality of workmanship |
|--------------------|-------------|---------------|---------------------------|-----------|-----------------------------|---------|-----------------------|------|---------------------------|
| A1 | 75 | 26 | 84 | 70 | 71 | 46 | 81 | 71 | 87 |
| A2 | 75 | 70 | 81 | 76 | 76 | 52 | 79 | 72 | 77 |
| A3 | 80 | 76 | 64 | 66 | 62 | 55 | 61 | 77 | 74 |
| A4 | 63 | 68 | 68 | 56 | 54 | 86 | 83 | 74 | 45 |
| A5 | 71 | 40 | 70 | 64 | 63 | 66 | 71 | 55 | 75 |
| A6 | 54 | 41 | 51 | 60 | 72 | 58 | 70 | 60 | 81 |
| A7 | 71 | 55 | 61 | 89 | 75 | 38 | 58 | 65 | 70 |
| A8 | 42 | 10 | 12 | 5 | 0 | 12 | 10 | 29 | 0 |
| A9 | 71 | 50 | 72 | 75 | 60 | 72 | 72 | 75 | 72 |
| A10 | 81 | 82 | 65 | 88 | 58 | 68 | 65 | 85 | 81 |
| A11 | 70 | 73 | 88 | 72 | 81 | 69 | 72 | 38 | 85 |
| A12 | 79 | 59 | 64 | 68 | 58 | 55 | 81 | 58 | 87 |
| A13 | 77 | 68 | 68 | 91 | 65 | 65 | 87 | 59 | 74 |
| A14 | 72 | 72 | 70 | 90 | 44 | 75 | 66 | 60 | 87 |
| A15 | 68 | 68 | 73 | 95 | 56 | 80 | 55 | 35 | 75 |
| A16 | 62 | 75 | 82 | 75 | 59 | 54 | 44 | 41 | 45 |
| A17 | 55 | 35 | 57 | 71 | 45 | 38 | 26 | 50 | 44 |
| A18 | 65 | 70 | 73 | 70 | 38 | 46 | 81 | 71 | 87 |
| A19 | 63 | 76 | 70 | 74 | 39 | 52 | 79 | 74 | 77 |
| A20 | 54 | 68 | 55 | 68 | 63 | 86 | 83 | 88 | 38 |
| A21 | 63 | 63 | 88 | 91 | 62 | 66 | 58 | 58 | 66 |
| A22 | 80 | 58 | 73 | 94 | 71 | 58 | 72 | 72 | 87 |
| A23 | 75 | 59 | 51 | 95 | 62 | 38 | 66 | 88 | 75 |
| A24 | 75 | 45 | 68 | 88 | 54 | 72 | 85 | 48 | 38 |
| A25 | 54 | 41 | 64 | 74 | 63 | 46 | 55 | 55 | 45 |
| A26 | 42 | 42 | 81 | 73 | 72 | 52 | 83 | 65 | 77 |
| A27 | 58 | 68 | 75 | 48 | 92 | 58 | 88 | 72 | 72 |
| A28 | 88 | 72 | 45 | 68 | 92 | 55 | 88 | 72 | 72 |
| A29 | 85 | 65 | 58 | 72 | 94 | 64 | 84 | 64 | 81 |
| A30 | 75 | 58 | 78 | 86 | 83 | 48 | 65 | 55 | 58 |

With the perusal of results in table 1 it can be concluded that all the bags ranging from A₁ to A₃₀ were found to be acceptable on almost all the parameters. A₁ bag scored highest in quality of workmanship. The color combination of A₂ was highly appreciated. The bag A₅ and A₆ scored a bit low i.e. 40% and 41% in functionality. Similarly, bag A₈ scored only

10% in functionality and hence was not found to be acceptable in this parameter. In terms of designing attributes bag A₁₃ scored 99%, A₁₅ scored 95% and A₁₄ scored 90%. The texture of A₁₄ was liked by most of the respondents, with a score of 80%. Bag A₁ was found to top the list in overall appearance with 81% score.

Fig 1: Five top ranked value added bags

| S. No. | Bags |
|--------|---|
| 1 | <p>A27</p>  |

| | |
|---|---|
| 2 | <p>A28</p>  |
| 3 | <p>A1</p>  |
| 4 | <p>A23</p>  |
| 5 | <p>A29</p>  |

Table 2: Raw materials used in value added bags

| S. No. | Materials | Percentage |
|--------|--|------------|
| 1 | Plastic strips with cotton cloth lining | 90% |
| 2 | Cotton cloth with buckrum lining | 80% |
| 3 | Thin cloth with jeans cloth | 90% |
| 4 | Jute cloth with old cloth lining | 70% |
| 5 | Cotton cloth with fine cloth lining | 70% |
| 6 | Quilting work with form | 80% |
| 7 | Synthetic cloth with non-woven spun bonded plain shopping bags | 70% |
| 8 | Wool with lining of jute | 50% |
| 9 | Bamboo strips with cloth | 100% |
| 10 | Jute cloth with jeans cloth lining | 95% |

| | | |
|----|---|-----|
| 11 | Jeorget cloth with cotton lining | 65% |
| 12 | Satin cloth with tricot lining | 70% |
| 13 | Jeans bags | 55% |
| 14 | Brown thick paper with thin buckram lining | 60% |
| 15 | Trousers cloth with thin buckrum lining | 70% |
| 16 | Jute cloth with synthetic cloth lining | 65% |
| 17 | Quilting bag with towel cloth lining | 70% |
| 18 | Synthetic cloth with plastic bori | 85% |
| 19 | Jute weaving bags with satin cloth lining | 80% |
| 20 | Quilting bags with statin cloth lining | 55% |
| 21 | Curtain cloth with buckrum lining | 75% |
| 22 | Satin cloth with bags cloth lining | 70% |
| 23 | Synthetic cloth with non-woven spun bonded plain shopping cloths bags | 75% |
| 24 | Tricot cloth with thick decorative border | 65% |
| 25 | Jute cloth with tricot cloth border | 85% |
| 26 | Pant cloth with thick polyester border | 90% |
| 27 | Plastic straps with non-woven spun bombed plain shopping bags | 60% |
| 28 | Tripal cloth bag with synthetic border | 75% |
| 29 | Plastic bori with thick decorative cloth | 50% |
| 30 | Handmade paper with chart paper lining | 65% |

Table 2 depicts the acceptance given by respondents for material utilized in making of value added bags. It was observed from the data in table no 2 that almost all the materials were accepted by the respondents as none of these received an acceptance below 50%. The highest acceptance was reported to be 95% for jute cloth with jeans cloth lining. Three materials received the acceptance level of 90% and ranked second. These were plastic strips with cotton cloth lining, thin cloth with jeans, cloth and pant cloth with thick polyester border. Synthetic cloth with plastic bori and jute cloth with tricot border were ranked third with an acceptance level of 85%.

Conclusion

It was concluded that bags prepared through value added materials were highly accepted by all the respondents. It was also observed that all value added materials of jute, paper, old clothes, plastic sheets were found to be acceptable to such an extent that these may mark their identify superior to plastic bags in the years to come. These bags will help on saving the environment by double check approach. As these not only work as a strong substitute to plastic bags but also, they do not let the textile materials enter the landfills. It may be also be differed from this study that value addition of bags gave them a strength thus increasing their shelf life which acted as a positive factor in their acceptance by the respondents.
